Supplementary Figure 1. Agreement between AHI derived from T90 and FN. (A) Scatter plot of the AHI derived from T90 and FN. The concordance correlation coefficient for these data was 0.739, indicating a moderate degree of correlation. The dashed line is the $y=x$ line, and the solid line is the trend line. (B) Bland-Altman plot for the AHI derived from T90 and FN. The dotted line indicates the mean of the differences or bias, and the dashed lines indicate the lower and upper 95% limits of agreement. AHI: apnea-hypopnea index.
