Supplementary Figure 1. Persistence to first-line narcolepsy therapy in treatment-naïve patients (sample 3). Kaplan-Meier curves showing the proportion of patients without changes or treatment discontinuation over time for the treatment-naïve sample (A) and the treatment-naïve sensitivity sample (B) with the altered definition of narcolepsy-specific medication, excluding certain monoamine oxidase inhibitors and certain antidepressants as described in the methods section. CI, confidence interval.
